

Caleb Brown

Auburn, AL | caleb@auburn.edu | GitHub: github.com/cnbrown04

Technical Skills

- **Languages & Frameworks:** Go/Gin, Swift, C#, Zig, JavaScript/TypeScript, React, SQL/PostgreSQL, Unity
- **Cloud & DevOps:** Microsoft Azure, Kubernetes, ArgoCD, CI/CD, GitHub Actions, Git
- **Hardware & Standards:** RAIN RFID, NFC, 2D Barcode Systems, Zebra Handheld Readers, GS1
- **Engineering & Leadership:** Systems Architecture, Microservice Architecture, Code Review, Project Management, Team Leadership, Agile & Scrum, Product Lifecycle Management

Relevant Experience

Product Development Manager, *Auburn University RFID Lab – Auburn, AL* *August 2023 – Present*

- Built and maintained an RFID tag/inlay performance auditing system, keeping ARC and ALEC compliance for major Fortune 500 retail partners using React, Go/Gin, and Swift (iOS App)
- Owned the full software development lifecycle ensuring coding standards, running code reviews and documentation to keep code reliable, readable and maintainable
- Hired, onboarded, and mentored the team; built feedback loops and development plans that improved retention and aligned goals with partners and internally
- Maintained DevOps infrastructure on Azure with multiple Kubernetes clusters, ArgoCD, and GitHub Actions CI/CD pipelines for reliable, scalable deployments
- Built an iOS app alongside GS1 engineers to support a global study on 2D barcode adoption, delivering partners data tools and infrastructure

Training Director, *Chick-fil-A – LaGrange, GA & Auburn, AL* *Aug 2020 – Aug 2025*

- Directed shift operations and staff coordination to keep dining and kitchen service running smoothly
- Managed peak service periods, cutting wait times through updated staffing and workflow strategies
- Executed quality checks and inventory management to maintain compliance with health and safety regulations
- Designed and led training programs that raised service skill, product knowledge, and operational efficiency
- Evaluated trainee progress, delivering targeted feedback and coaching to close performance gaps

Relevant Projects

EAGLE Platform *eagle.rfidlab.org*

- Designed a multi-scope platform with a microservice architecture on Azure Kubernetes to assist major Fortune 500 partners in auditing their RFID performance in warehouses and stores globally
- Ensured reliability of services through separation of responsibility, allowing multi-service failover without customer impact, using separate backends and frontends as well as isolated authentication and authorization
- Built a dedicated iOS mobile application that integrates with Zebra handheld RFID readers by writing a Swift integration SDK from scratch
- Grew the effort to a team of 10 software engineers developing and maintaining new features for major retail partners while supporting customer service and quality assurance

RFID Trilateration & Sensor Fusion *1st Place, Auburn RFID Lab Hackathon*

- Built RFID trilateration with three antennas and a single Zebra FX9600, using a Zig backend to calculate RSSI positioning in real time
- Built a LiDAR and RFID sensor fusion demo for locating RFID-tagged items on a shelf based on unique identifiers stored in PostgreSQL

Certifications

Unity Certified Game Developer – C# proficiency for game development in Unity

ServSafe Restaurant Management Certificate – Food safety and restaurant management

Education

Auburn University – BS in Software Engineering

Aug 2022 – Present
